DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-19, 27-31 and 48 are rejected under 35 U.S.C. 102(b) as being anticipated by Nadas et al. (4,926,488).

As to claim 1, Nadas teaches a <u>speech recognition</u> system (200), comprising:

An adaptation model prototype memory (216) containing prototype acoustic pattern;

An adaptation engine/labeller (Fig.6); for matching the prototype acoustic patterns with input feature vectors (312) and selecting the closer prototype to the feature vector as well as identifying the feature vector modification function stored in a memory in accordance to the closer prototype (304) to transform/adapt the feature vector to a (speaker specific model) (Col.2, lines 48-61; Col.7, lines 20-30).

As to claims 2-5, Nadas teaches where the function is applied to transform the feature vectors and where the transformed feature vectors are matched with the reference patterns and where the functions consisted of parameters are stored (304) and updated (Col.3, lines 8-25).

As to claims 6-7, Nadas teaches where the values of parameters are clustered and selected according to a particular speaker and environment (Col.9, lines 26-43).

Application/Control Number: 09/773,831

Art Unit: 2655

Claims 8-19, 27-31 and 48, reciting the corresponding apparatus and the method, are analogous to claims 1-7 and are rejected for the foregoing reasons by Nadas et al.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 20-26, 32-47 and 49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nadas et al. as applied to the claims above, and further in view of Miazawa et al. (6,070,139).

As to claim 20-26, 32-47 and 49, Nadas doesn't explicitly teach the claimed arrangement (a recognition communication center and the remote station) both comprising a speech recognition system. However, Miazawa teaches adapting speaker model, in a distributed speech recognition system, comprising a remote unit having a speech recognition (for analyzing and adapting user's speech (23)) and transmitting the adapted speech to a server (10) where the server comprises the speech recognition and a communication interface (abstract; Fig.2). it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify Nadas teaching in view of Miazawa, in order to use the system as an interface in a client server environment.
